

Flexibility in an Outlook Environment

Meeting the Challenge

Outlook plays a vital role in corporate users' everyday tasks. They need quick access to Outlook when they are initially hired, when they get a new PC, or when they are away from their offices. The problem is that each PC needs Outlook to be uniquely configured for every user. This generally requires that a technician be dispatched to the desktop every time an employee is hired, gets a new PC, or wants to access Outlook from a different PC on the network. All too often, a technician is not readily available. The result is that the user is denied access, causing lack of productivity in the best case, loss of business in the worst. Exchange 5.5 sunsetting has pushed upgrades and migrations to 2000 or 2003. After a successful migration on the server side, the new help desk is often flooded with end user calls looking for their personal folders, settings, rules - everything associated with their PST/OST files.

"OProfile has been a lifesaver for us as we have a lot of roaming users: sometimes a PC will have multiple users in one day! This is the only product on the market that does what we need it to do, and does what it was designed to do: save us time by saving us from having to go to each workstation and set it up for each new person!"

*John Ethington

The Intelligent Solution for Outlook Profile Management

Automate profile generation with OProfile. Administrators will no longer need to configure a profile for each user on every computer that they'll be using. OProfile is ideal for provisioning new employees and new PCs and for situations where there are multiple people using the same machine.

Major Time Savings & ROI for Administrators and End users

Our customers tell us that OProfile reduces support calls and improves productivity. On average, our customers have a 5% employee turnover rate, replace their PCs every three years, and have 5% of their workforce that needs Outlook access from an alternate PC five times a month. If the average cost of a desktop visit by an Administrator or Helpdesk resource is estimated at \$50, OProfile reduces the cost associated with generating Outlook profiles by \$14 per user per month.

Key Administrator Benefits

Creating and managing Microsoft Outlook profiles doesn't need to be a time-consuming task. Imanami OProfile automatically creates and manages your users' Outlook profiles, freeing you up for more important tasks. Eliminate desktop visits and support calls for Outlook profile-related issues. OProfile enables you to manage all of the Outlook profiles from a central location and gives you the flexibility both to select how Outlook will be deployed and to control which features will appear.

Key Features

Control

Ensure that Outlook is configured for every user wherever they log on, eliminate end-user training for Outlook configuration, control which Outlook features are available to users, give users the ability to roam from workstation to workstation.

Org-to-Org Migration

Easily migrate existing profiles from one Exchange organization to another. Dramatically decrease post-migration help desk calls by ensuring client side profiles are carried over.

Flexibility

OProfile is the kiosk solution for organizations operating in mixed mode allowing your end users to experience their "own" Outlook, independent of Exchange 5.5, 2000 or 2003.

Web-based Deployment

Create a profile in just one click from a web page using OProfile's web deployment method.

Multiple Mailbox Support

Automatically add additional mailboxes to your profiles.

Internet Mail Support

Add POP and IMAP accounts to your profiles.

Outlook Bar Support

Create Outlook Bar Groups and shortcuts.

Signature Support

Create one standard signature for your entire enterprise.

Quick Templates

Quick Templates select the optimal value for OProfile's settings based on your environment. Select from the following template options: Default, Kiosk Machine, Terminal Server, or ASP/ISP.

Offline Settings

Configure mobile users to work off-line when away from the office.

OProfile supports all recent versions of Outlook and Exchange
