

Flexible Directory Reporting Tool

Meeting the Challenge

IT generates reports: some easy to create, and some not-so-easy. Reports can include simple Distribution Lists, Security Groups, who is on what list, who owns certain lists, last used, etc.

Even for the proverbial request to publish an internal phonebook, Exchange and Active Directory do not provide simple, easy-to-use reporting tools. Highly paid, highly trusted administrators must scroll through the Global Address List (GAL) and manually search for their targets, then consolidate the data, and finally put it all into a readable format.

All too often, there just isn't enough time.

The Intelligent Solution for Accurate Directory Information

SmartR, a wizard-based reporting tool allows you to quickly produce accurate reports on objects within your directory or GAL. Administrators can download the free version of the tool, install, run and print a meaningful report in the time it takes to read this data sheet. Reports can be easily customized if desired.

Flexible Directory Reporting

Find out what's in your directory fast using Imanami SmartR. Reports have never been easier to produce than with SmartR, which allows you to view or print accurate reports on objects within your directory or Global Address List (GAL). Out-of-the-box SmartR contains customizable report templates that administrators cannot live without, such as "Number of members of groups," "Groups and their Owners," "Last Modified," "Users," etc.

Once you complete the wizard, SmartR gathers the information from the Microsoft Exchange server or Active Directory domain controller and writes the results to an XML file. SmartR then automatically transforms the XML results into the format you requested using an XSL stylesheet. SmartR reports can be run interactively or as a scheduled task.

"Companies must have a barometer to measure the success of their operations: at all times, the individual employees, different departments and global divisions need to know what's going on. We must strive to improve internal communications and reporting to a level that provides the right information to the right person at the right time in order to make timely decisions. This outcome is dependent on identity management reporting that is accurate, speedy and efficient."

Daniel Edstrom
CTO
DTC Systems

Free Built-In Reports

- Groups and number of members
- Groups and Owners
- Groups and Members
- Groups and last modified time
- Recipients and groups they are a member of

Report Pack (\$99) Add-On Reports

- All Exchange Servers and version
- Disabled user accounts
- Locked out user accounts
- All computers and OS version
- Groups with no owner
- Groups with no members
- Phonebook

Ease of Use & Flexibility

Discover the information in your directory:

Wizard

Let the wizard guide you through the reporting process, ensuring that only the information you select is in your report.

Customizable Report Templates

Run reports right out of the box. Select from groups and number of members, groups and their last modified time, groups and members, groups and owners, etc. Add or remove additional fields to reports with ease, additional reports are available via Report Packs.

Report Formats

Select the report style you need. Use XML to export information to other systems and HTML for total viewing.

Choose your report style: CSV, XML, HTML, or XLS

Command Line Interface

SmartR reports can be run from the wizard or command line, allowing them to be easily scheduled.

SmartR is free and available for download from our web site at:
