

Group Lifecycle Management for any Directory

Better groups. Better security.

- Automatically and dynamically manage groups and users.
- Distribution lists and security groups are always up to date, increasing efficiency company-wide.
- Users are empowered to perform common tasks independently, reducing support calls to help desks.
- Significantly reduce or eliminate security risks due to poor group management.
- IT professionals save time by automating redundant error prone tasks.
- Nest groups with a few clicks in less than a minute.
- Support industry leading directories such as Microsoft's Active Directory, Azure Active Directory, generic LDAP based directories, and messaging platforms such as Microsoft's Exchange Server, Office 365 and Google G Suite of Business Applications.

Automatically creates, manages, and updates distribution lists and security groups by dynamically maintaining these groups based on rules from directory attributes or external databases. This results in increased efficiency, improved accuracy, and enhanced security. Groups will never be out of date.

Allow users to join/leave smart groups, apply workflow to changes in membership or group creation, and apply lifecycle to groups to ensure they are regularly attested to. Users are empowered to validate their profile and attributes while IT maintains control of the process.

Provision and deprovision accounts, update attributes, and apply applicable transformation to the data in a bidirectional manner to/from authoritative source to directory.

Delegate password reset to users to lighten the burden of the IT or help desk. Administrators can give advance warning to users of pending password expiration and empower them to easily change passwords based on set criteria.

This free module gives administrators access to over 100 reports on key details.

We have been using GroupID for about 10 years. We grew to about 66,000 DLs today that we manage in our environment. GroupID is easy to setup, easy to maintain, reliable and very flexible. They provide excellent customer support, quick and strong.
